RSVP to [events@hkrsa.org.hk](mailto:events@hkrsa.org.hk)

As part of the HKRSA CIO series, our next session will be held with Vinod Chandrashekar, CIO of Quantitative Equity at American Century Investments who is visiting Asia in late August. Vinod manages USD15 billion of AUM and 50% of this is pension assets. Vinod will draw on his experience with pension assets over the past 15 years to contrast the traditional role of technology in managing pension assets with the evolving role of big data, AI and machine learning which is transforming the industry as we know it.

The problem of saving for retirement is one of the most complicated problems an investor will face, with many different choices of instruments to transfer wealth from today to the future, different consumption patterns over the life-cycle and therefore varying needs for the attributes of investments at each stage of the life cycle. The mathematical problem is not easy to solve, but advances in technology, data will enable more complete solutions to this challenging problem. Hope you can join us to obtain insights from one of the top CIOs in this industry.
